HOW TO DO BEEWAX CANDLE?

BEESWAX CANDLES AND SHAPES

Para-therapeutic and relaxing attributes of beeswax candles have been known for hundreds of years. They used to be used for liturgical rites and also for providing light to rich households.

They are featured by an attractive and original outlook; they burn smokeless whilst producing a soft, gentle scent of honey and propolis, they also work as negative ionisers.

They eliminate electromagnetic radiation caused by electrical appliances and neutralize cigarette smoke.

Beeswax candles, and their process of burning in particular, soothes and calms you down, makes breathing easier, heals blocked sinuses and provides relief for running nose and asthma and even reduces high blood pressure.

It is recommended to burn candles every day from 15 to 60 minutes.

Beeswax, the material the candles are made of, is obtained from old wax and edgings that are left out during the frame uncapping and other debris.

After melting and possible clarification and filtration, one can refine it by adding various essential or fragrance oils, although it is not necessary.

MULTI-FUNCTIONALITY OF FORMS

Silicone molds can be used for the production of other raw materials:

- Bee wax
- soy wax
- palm wax
- paraffin
- ceramic plaster
- creative concrete
- an epoxy resin
- soap base

SILICONE MOLDS CANNOT BE SUITABLE FOR THE PRODUCTION OF FOOD PRODUCTS

MAKING YOUR OWN BEESWAX CANDLE

STEP-BY-STEP:

You will need:

a silicon mould,
a wick (with appropriate thickness i.e. the larger candle, the thicker wick)
a rubber band
a toothpick
silicone (spray) - optional
You can spray the mould from inside with silicone to make it easier to take it out afterwards if the pattern is more complex.

to make it easier to remove the candle from the mold, it is recommended to spray the mold with silicone spray

The wick should be put into the mold before pouring, it should be slightly taut

use liquid wax heated to ~ 50C for pouring the mold

the form should be fastened with rubber bands before pouring and secure properly to avoid spilling wax

take precautionary measures

1. PREPARING THE MOULD

If we intend to cast the candle with a complex pattern, it is recommended to spray it from inside with silicone – this will make it easier to remove it once the whole process has been completed. Cut the wick of appropriate length (it has to be longer than the mould itself) and thread it through the candle inside. The next step is to put the rubber bands onto the mould followed by sticking the toothpick into the wick's ending and stretching it properly.

2. FILLING THE MOULD WITH WAX

It is recommended to melt the wax in the pot (enamelled). Prior to filling the mould, make sure that the wax has got an appropriate temperature – around 60 degrees Celsius is recommended. It must neither be too hot nor too cold. Pour the wax in gently, making sure it gets into all mould's pockets. The time needed for the wax to set depends on the size of the mould.

3. REMOVING A CANDLE FROM THE MOULD

Once the wax has set and become cold, take the rubber bands off, open the mould and gently remove the candle and take off the toothpick. Cut the wick off at the bottom and leave around 1 cm of wick on the top.

The last part of 'making the candle' is to finish it off with a knife – cutting all sticking-out parts at the bottom and dipping the wick into the fluid wax.

Once done, candles may be decorated by using special wax markers; more advanced users can use 'decoupage' technique or natural products such as coffee beans.

Due to the dimensions, the sold forms are not cut.
A wire is added to the mold to facilitate the pulling
of the wick.

CANDLE MOULD TEALIGHT

Mould dimensions: 22,5 cm x 16 cm

FM021	Candle mould tealight - hexagons
FM022	Candle mould tealight - stars
FM023	Candle mould tealight - hearts
FM024	Candle mould tealight – rings

Preis: 16,90

These soft plastic candle moulds are ideal even for craft beginners thanks to their great ease of use. The heart-shaped mold for 8 tealight candles is very resistant to high temperatures, so you can pour melted wax into it without any worries.

At the bottom of each cell of the mold is a cavity in which you can place a special wick with a tealight tin. Simply place the wick in the mould, pour in the wax and wait until the wax solidifies. Our moulds are very flexible so that you can pull out the candle after it has solidified without any problem.

CANDLE WICKS

We have two types of wicks:

Round cotton wicks with a thickness of 1.5, 2 and 3 mm flat cotton wicks with a braid weave (the number indicates the number of threads)

The label of the mold contains the suggested wick for the beeswax candle. The selection of the right wick depends on the base material, i.e. the quality of the wax, the type of paraffin etc. The burning of the candle is also influenced by the dyes and fragrances used.

3006	Candle wick 3mm, skein 20m
3112	Candle wick 2mm, skein 20mm
3007	Candle wick 1,5mm, skein 20m
3274	Candle wick 3x13, 20m
3275	Candle wick 3x6, 20m
3276	Candle wick 3x7, 20m
3277	Candle wick 3x8, 20 m
3278	Candle wick 3x9, 20 m
3281	Candle wick 3x16, 20m
3282	Candle wick 3x10, 20m
3283	Candle wick 3x11, 20m
3284	Candle wick 3x18, 20m

WICK HOLDER, PACK OF 8 PCS

Special wick holders enable convenient and efficient production of beeswax candles.
